

MEASURING UP

2004

**THE STATE REPORT CARD
ON HIGHER EDUCATION**

LOUISIANA

**THE NATIONAL CENTER FOR
PUBLIC POLICY AND
HIGHER EDUCATION**

WHAT IS MEASURING UP?

This state report card is derived from *Measuring Up 2004*, the national report card for higher education. Its purpose is to provide the public and policymakers with information to assess and improve postsecondary education in each state. *Measuring Up 2004* is the third in a series of biennial report cards.

Measuring Up 2004 evaluates states on their performance in higher education because it is the states that are primarily responsible for educational access and quality in the United States. In this report card, “higher education” refers to all education and training beyond high school, including all public and private, two- and four-year, for-profit and nonprofit institutions.

The report card grades states in six overall performance categories:

■ **Preparation:** How adequately are students in each state being prepared for education and training beyond high school?

■ **Participation:** Do state residents have sufficient opportunities to enroll in education and training beyond high school?

■ **Affordability:** How affordable is higher education for students and their families?

■ **Completion:** Do students make progress toward and complete their certificates and degrees in a timely manner?

■ **Benefits:** What benefits does the state receive as a result of having a highly educated population?

■ **Learning:** What is known about student learning as a result of education and training beyond high school?

Each state receives a grade in each performance category, and the grades are based on the state’s performance on several indicators, or quantitative measures, in each category. Most states receive an “Incomplete” in learning because there are no common benchmarks that allow for state-by-state comparisons in learning. Five states, however, receive a “Plus” in learning to highlight their work in developing measures to evaluate the state’s educational capital—that is, the reservoir of high-level knowledge and skills

that the state’s population has attained. For more information about this, see page 12 of this state report card.

In four of the performance categories—preparation, participation, completion, and benefits—grades are calculated by comparing each state’s current performance to that of the best-performing states. This provides a basis for assessing and comparing each state’s performance in the national context and encourages each state to “measure up” to the highest performing states.

In the affordability category, however, the nation as a whole is “measuring down.” That is, even in the best-performing states, higher education has become *less* rather than *more* affordable when the costs of attending college are considered in relation to family income. As a result, grades in the affordability category are calculated by comparing each state’s current results to the performance of the top states *a decade ago*. This enables policymakers to examine their state’s results in relation to other states, while also encouraging improved performance over time. A glance at the table of state grades on page 15 reveals that the affordability category is the only one in which no state receives an A.

Measuring Up 2004 also compares each state’s current results with its own performance a decade ago. Although this historical information is not graded, it is offered to allow states to examine their improvements and declines in performance. In gathering information for this period, information from 1992—or the closest year available—is compared with the most recently available data. All information was collected from national, reliable sources, including the U.S. Census Bureau and the U.S. Department of Education. (For more information about grading, data collection, and sources, please see the technical report at www.highereducation.org.)

This state report card begins by summarizing the state’s performance today compared with ten years ago, and by presenting key policy questions that these results suggest for the state. Next, the state’s performance in each category is described in greater detail, followed by additional contextual information.

A Snapshot of Improvement Over the Past Decade

High school graduates are, in general, better prepared for college today than their peers were a decade ago. However, most states, and the nation as a whole, have made little progress in translating these gains into improvements at the college level.

Preparation: 44 states improved on more than half of the indicators; 6 improved on some of the indicators.

Participation: 8 states improved on more than half of the indicators; 23 improved on some of the indicators; 19 declined on every indicator.

Affordability: 2 states improved on more than half of the indicators; 31 improved on some of the indicators; 17 declined on every indicator.

Completion: 37 states improved on more than half of the indicators; 9 improved on some of the indicators; 4 declined on every indicator.

Benefits: 41 states improved on more than half of the indicators; 8 improved on some of the indicators; 1 declined on every indicator.

Learning: 45 states receive an “Incomplete”; 5 states (Illinois, Kentucky, Nevada, Oklahoma, and South Carolina) receive a “Plus.”

For more information about improvement, please see *Measuring Up 2004: The National Report Card on Higher Education* at www.highereducation.org.

Louisiana performs poorly in preparing students for and enrolling them in college. Very low percentages of secondary students are taught by qualified teachers, and very few students take the rigorous high school courses they need to succeed in college. If the state's schools could increase the number of students graduating from high school within four years, the likelihood of students enrolling in college by age 19 would improve. The high cost of attending public two- and four-year colleges and universities for low- and middle-income students is a critical policy issue for the state.

Strengths

Preparation

- Compared with other states, a large percentage of Louisiana high school students enroll in upper-level math.

Affordability

- Louisiana has held the line in the share of family income, after financial aid, needed to attend its community colleges. About 18% of annual family income, on average, is needed to attend a community college in the state.

Completion

- A large percentage of Louisiana's first-year students in community colleges return for their second year, compared with other states.

- A large proportion of freshmen at four-year colleges and universities return for their sophomore year. This proportion has increased substantially over the past decade, in contrast to a nationwide decline on this measure.

- Over the past decade, Louisiana has narrowed the gaps between whites and all minority ethnic groups in the proportion of students completing certificates and degrees. However, substantial gaps remain.

Weaknesses

Preparation

- Louisiana is one of the lowest performing states in the percentage of young people earning a high school credential.

- Compared with other states, Louisiana's students perform very poorly on national assessments in math, science, reading, and writing.

- A very small proportion of 8th graders take algebra. Over the past decade, the state has seen one of the largest declines in the country on this measure.

- Low-income 8th graders perform very poorly on national assessments in math.

- Very small proportions of 11th and 12th graders take and score well on Advanced Placement tests or on college entrance exams, compared with other states.

- Only half of secondary school students are taught by qualified teachers—the lowest percentage in the country.

Participation

- Compared with other states, the likelihood of Louisiana 9th graders enrolling in college within four years is low. Two factors underlie this poor performance. The proportion of students graduating from high school within four years is among the lowest in the country. Of those who do graduate, few go on to college.

- About 20% of adults do not have a high school diploma or its equivalent (compared with a national average of 14%), making them ineligible for participation in higher education.

- The gap in college enrollment between whites and minority ethnic groups has widened over the past decade.

- Young adults from high-income families are three times as likely to attend college as those from low-income families. This is one of the widest gaps in the nation on this measure.

Affordability

- Net college costs for low- and middle-income students to attend public four-year colleges represent about a third of their annual family income. This population earns on average \$15,600 annually. (Net college costs equal tuition, room, and board minus financial aid.)

Completion

- Compared with other states, a very low percentage of first-time, full-time college students complete a bachelor's degree within six years of enrolling.

Benefits

- Compared with other states, a small proportion of Louisiana residents have a bachelor's degree, although the state is improving on this measure.

Policy Questions

- Can higher education improve partnerships with K–12 schools to improve student achievement and preparation for college? Specifically, can higher education meet the needs of the state's primary and secondary schools for more qualified teachers in the classroom?

- Can Louisiana increase the number of students who finish high school within four years?

- Given that approximately 20% of adults do not have a high school diploma or its equivalent, can the state encourage more residents to get a General Education Development (GED) credential?

- Can the state develop financial aid programs that more effectively meet the needs of students from low-income families?

- Louisiana's Tuition Opportunity Program for Students (TOPS) provides funds for students to enroll in higher education based largely on academic performance in high school. Can the state also enhance its focus on access to college for qualified low-income students?

2004
Grade

Improvement
Over Decade

Despite notable improvement over the past decade, Louisiana continues to lag behind other states in preparing students to succeed in college. This year Louisiana is one of only two states to receive an F in preparation.

Graded Information

■ Louisiana is among the poorest-performing states in the percentage of young adults earning a high school diploma or General Education Development (GED) diploma by age 24.

■ Compared with other states, a large proportion (49%) of high school students are enrolled in upper-level math, but a very small proportion (24%) are enrolled in upper-level science.

■ A very small proportion (4%) of 8th graders take algebra.

■ Eighth graders perform very poorly on national assessments in math, science, reading, and writing, indicating that they are not very well prepared to succeed in challenging high school courses.

■ Compared with their peers in other states, low-income 8th graders perform very poorly on national assessments in math.

■ Extremely small proportions of 11th and 12th graders score well on Advanced Placement tests and college entrance exams.

■ About half of secondary school students are taught by qualified teachers; Louisiana is the lowest-performing state on this measure.

Change in Graded Measures

■ Over the past decade, the proportion of high school students enrolled in upper-level science has increased substantially, although Louisiana's current performance is very low compared with other states.

PREPARATION	LOUISIANA		Top States 2004
	A Decade Ago	2004	
High School Completion (20%)			
18- to 24-year-olds with a high school credential	84%	84%*	94%
K-12 Course Taking (35%)			
9th to 12th graders taking at least one upper-level math course	43%	49%	59%
9th to 12th graders taking at least one upper-level science course	18%	24%	41%
8th grade students taking algebra	5%	4%	35%
12th graders taking at least one upper-level math course	n/a	n/a	66%
K-12 Student Achievement (35%)			
8th graders scoring at or above "proficient" on the national assessment exam:			
in math	7%	17%	36%
in reading	18%	22%	39%
in science	13%	18%	42%
in writing	12%	18%	41%
Low-income 8th graders scoring at or above "proficient" on the national assessment exam in math	3%	8%	23%
Number of scores in the top 20% nationally on SAT/ACT college entrance exam per 1,000 high school graduates	103	125	227
Number of scores that are 3 or higher on an Advanced Placement subject test per 1,000 high school juniors and seniors	23	32	219
Teacher Quality (10%)			
<i>7th to 12th graders taught by teachers with a major in their subject</i>	39%	51%	81%

*Seventy-eight percent of 18- to 24-year-olds have a regular high school diploma; 6% have a GED.
Note: Indicators in italics are new for 2004.

■ The percentage of 8th graders taking algebra has decreased substantially in the same period—one of the sharpest declines in the nation on this measure. The state’s current performance on this measure is extremely poor relative to other states.

■ During the past decade, the percentage of 8th graders performing well on national assessments in math has more than doubled. However, the state’s current performance is poor compared with other states.

■ Over the past few years, the percentage of 8th graders performing well on national assessments in science has increased substantially; however, Louisiana’s current performance is very poor compared with other states.

■ The percentage of 8th graders performing well on national assessments in reading has increased by 22% over the same period, in contrast to a national decline of 3% on this measure.

■ Also, the percentage of 8th graders performing well on national assessments in writing has increased substantially; however, the state’s current performance is very low relative to other states.

■ During the past decade, the percentage of low-income 8th graders performing well on national assessments in math has more than doubled, although the state still performs very poorly on this measure compared with other states.

■ The percentage of secondary school students taught by qualified teachers has increased substantially over the same period.

Other Key Facts

■ About 26% of children under age 18 live in poverty, compared with a national rate of 17%.

■ Policymakers and state residents do not have access to important information about 12th graders taking upper-level math because the state did not report the data by grade level.

The preparation category measures how well a state’s K–12 schools prepare students for education and training beyond high school. The opportunities that residents have to enroll in and benefit from higher education depend heavily on the performance of their state’s K–12 educational system.

2004
Grade

Improvement
Over Decade

Over the past decade, Louisiana has made no notable progress in enrolling students in higher education. This year Louisiana receives a D+ in participation.

Graded Information

■ Compared with other states, the chance of Louisiana high school students enrolling in college by age 19 is low, because few students graduate from high school and enroll in college. The proportion of students graduating from high school within four years is among the lowest in the country.

■ A very low percentage of working-age adults (ages 25 to 49) are enrolled part-time in college-level education or training.

Change in Graded Measures

■ Over the past decade, the chance of enrolling in college by age 19 has increased by 13%—one of the steepest increases among the states on this measure. Nonetheless, the state's current performance remains low when compared with other states.

Other Key Facts

■ Among the young adult population (ages 18 to 24), the gap in college participation between whites and minority ethnic groups has widened. A decade ago, 30 of every 100 young adults from minority ethnic groups were enrolled in college; now only 26 of 100 are.

PARTICIPATION	LOUISIANA		Top States 2004
	A Decade Ago	2004	
Young Adults (60%)			
Chance for college by age 19	29%	33%	52%
18- to 24-year-olds enrolled in college	35%	32%	40%
Working-Age Adults (40%)			
25- to 49-year-olds enrolled part-time in any type of postsecondary education	3.1%	2.8%	5.4%

■ Young adults from high-income families are three times as likely as those from low-income families to attend college—a gap that is among the widest in the nation.

■ The state's population is projected to grow by 9% from 2000 to 2015, compared with a national rate of 13%. During approximately the same period, the number of high school graduates is projected to decrease by 11%.

■ About 20% of the adult population has less than a high school diploma or its equivalent, compared with 14% of adults nationwide.

■ In Louisiana, 1,209 more students are entering the state than are leaving to attend college. About 9% of Louisiana high school graduates who go to college attend college out of state.

The participation category addresses the opportunities for state residents to enroll in higher education. A strong grade in participation generally indicates that state residents have high individual expectations for education and that the state provides enough spaces and types of educational programs for its residents.

2004
Grade

Improvement
Over Decade

Despite being one of the few states to make improvements over the past decade, Louisiana still performs poorly in providing affordable higher education opportunities. Louisiana receives an F in affordability this year.

Graded Information

■ Louisiana has held the line on the share of family income, after financial aid, needed to attend its public two-year colleges. Compared with top-performing states, however, families in Louisiana devote a fairly large share of their income to attend public four-year colleges and universities. These two sectors enroll about 86% of Louisiana's college students.

■ The state has made no investment in need-based financial aid.

■ Undergraduate students borrowed on average \$3,221 in 2003.

Other Key Facts

■ In Louisiana, 24% of students are enrolled in community colleges and 62% in public four-year colleges and universities.

AFFORDABILITY	LOUISIANA		Top States A Decade Ago
	A Decade Ago	2004	
Family Ability to Pay (50%)			
Percent of income (average of all income groups) needed to pay for college expenses minus financial aid:			
at community colleges	22%	18%	15%
at public 4-year colleges/universities	24%	23%	16%
at private 4-year colleges/universities	88%	87%	32%
Strategies for Affordability (40%)			
State investment in need-based financial aid as compared to the federal investment	4%	0%	89%
At lowest-priced colleges, the share of income that the poorest families need to pay for tuition	18%	13%	7%
Reliance on Loans (10%)			
Average loan amount that undergraduate students borrow each year	\$2,875	\$3,221	\$2,619

Note: In the affordability category, the lower the figures the better the performance for all indicators except for "State investment in need-based financial aid."

The affordability category measures whether students and families can afford to pay for higher education, given income levels, financial aid, and the types of colleges and universities in the state.

A CLOSER LOOK AT FAMILY ABILITY TO PAY	Average family income	Community colleges		Public 4-year colleges/universities		Private 4-year colleges/universities	
		Net college cost*	Percent of income needed to pay net college cost	Net college cost*	Percent of income needed to pay net college cost	Net college cost*	Percent of income needed to pay net college cost
Income groups used to calculate 2004 family ability to pay							
20% of the population with the lowest income	\$9,180	\$4,021	44%	\$4,924	54%	\$21,175	231%
20% of the population with lower-middle income	\$22,044	\$4,657	21%	\$5,601	25%	\$21,079	96%
20% of the population with middle income	\$37,300	\$5,041	14%	\$6,199	17%	\$20,480	55%
20% of the population with upper-middle income	\$60,050	\$5,149	9%	\$6,565	11%	\$20,249	34%
20% of the population with the highest income	\$101,200	\$5,197	5%	\$6,557	6%	\$21,599	21%
40% of the population with the lowest income	\$15,612	\$4,339	28%	\$5,262	34%	\$21,127	135%

*Net college cost equals tuition, room, and board, minus financial aid.

Those who are striving to reach or stay in the middle class—the 40% of the population with the lowest incomes—earn on average \$15,612 each year

■ If a student from such a family were to attend a community college in the state, their net cost to attend college would represent about 28% of their income annually:

Tuition, room, and board:	\$5,248
Financial aid received:	-\$ 909
Net college cost:	\$4,339
Percent of income:	28%

■ If the same student were to attend a public four-year college in the state, their net cost to attend college would represent about 34% of their income annually:

Tuition, room, and board:	\$7,211
Financial aid received:	-\$1,949
Net college cost:	\$5,262
Percent of income:	34%

Note

The numbers shown for tuition, room, and board minus financial aid may not exactly equal net college cost due to rounding.

2004
Grade

Improvement
Over Decade

Over the past decade, Louisiana has improved substantially in the proportion of students earning a certificate or degree in a timely manner. Nonetheless, Louisiana receives a C in completion because other states performed better.

Graded Information

■ Compared with other states, large percentages of first-year students in community colleges and four-year colleges and universities return for their second year.

■ However, a very low percentage (37%) of first-time, full-time college students complete a bachelor's degree within six years of entering college, making Louisiana one of the lowest-performing states on this measure.

■ The proportion of students completing certificates and degrees, relative to the number enrolled, is fairly high.

Change in Graded Measures

■ The percentage of freshmen at four-year colleges and universities returning for their sophomore year has increased substantially over the past decade, making Louisiana one of the fastest improving states on this measure.

■ Over the past few years, the state has increased the percentage of first-time, full-time college students earning their bachelor's degree within six years of enrolling in college, although Louisiana's current performance on this measure remains very low relative to other states.

COMPLETION	LOUISIANA		Top States 2004
	A Decade Ago	2004	
Persistence (20%)			
1st year community college students returning their second year	n/a	53%	63%
Freshmen at 4-year colleges/universities returning their sophomore year	61%	71%	84%
Completion (80%)			
First-time, full-time students completing a bachelor's degree within 6 years of college entrance	33%	37%	64%
Certificates, degrees, and diplomas awarded at all colleges and universities per 100 undergraduate students	12	17	21

■ Over the past decade, Louisiana has been one of the fastest improving states in the proportion of students completing certificates and degrees relative to the number enrolled. However, the state's improvement on this indicator has been primarily in certificates awarded, while the proportion of bachelor's degrees awarded has declined sharply.

Other Key Facts

■ Over the past decade, Louisiana has made progress in narrowing the gaps between whites and all minority ethnic groups in the proportion of students completing certificates and degrees relative to the number enrolled. In particular, the proportion of black students receiving certificates and degrees has increased from 9 to 16 per 100 enrolled.

The completion category addresses whether students continue through their educational programs and earn certificates or degrees in a timely manner. Certificates and degrees from one- and two-year programs as well as the bachelor's degree are included.

2004
Grade

Improvement
Over Decade

Over the past decade, Louisiana has seen no notable progress in the benefits to the state as a result of a more highly educated population. This year Louisiana receives a C in benefits.

Graded Information

■ Compared with other states, a small proportion of residents have a bachelor's degree, and this substantially weakens the state economy.

■ However, residents contribute substantially to the civic good, as measured by charitable giving, voting, and especially volunteerism. Louisiana is the top state on the volunteerism measure.

Change in Graded Measures

■ The percentage of residents who have a bachelor's degree has increased substantially over the past decade, but the economic benefits enjoyed by the state as a result of having an educated population have decreased.

Other Key Facts

■ If all ethnic groups had the same educational attainment and earnings as whites, total personal income in the state would be about \$5 billion higher, and the state would realize an estimated \$1.7 billion in additional tax revenues.

■ In 2002, Louisiana scored 46 on the New Economy Index, compared to a nationwide score of 60. The New Economy Index, developed by the Progressive Policy Institute, measures the extent to which states are participating in knowledge-based industries.

BENEFITS	LOUISIANA		Top States 2004
	A Decade Ago	2004	
Educational Achievement (37.5%)			
Population aged 25 to 65 with a bachelor's degree or higher	18%	24%	36%
Economic Benefits (31.25%)			
Increase in total personal income as a result of the percentage of the population holding a bachelor's degree	8%	7%	12%
Increase in total personal income as a result of the percentage of the population with some college (including an associate's degree), but not a bachelor's degree	2%	1%	3%
Civic Benefits (31.25%)			
Residents voting in national elections	60%	52%	60%
Of those who itemize on federal income taxes, the percentage declaring charitable gifts	90%	87%	92%
<i>Increase in volunteering rate as a result of college education</i>	n/a	23%	22%
Adult Skill Levels (0%)*			
Adults demonstrating high-level literacy skills:			
quantitative	14%	16%	33%
prose	13%	15%	33%
document	11%	13%	28%

*Adult Skill Levels for 2004 are estimated and are not used to calculate grades.

Note: Indicators in italics are new for 2004.

■ Policymakers and state residents do not have access to important information about high-level literacy skills because the state has declined to participate in the national literacy survey.

The benefits category measures the economic and societal benefits that the state receives as the result of having well educated residents.

2004
Grade

Like most states, Louisiana received an Incomplete in learning because there are no comparable data that would allow for meaningful state-by-state comparisons in learning. The Incomplete in this category highlights a gap in our ability to measure each state's educational capital—the reservoir of high-level knowledge and skills that benefit each state.

Measuring Up 2004 gives a “Plus” in learning to five states (Illinois, Kentucky, Nevada, Oklahoma, and South Carolina) that have developed learning measures through their participation in a national demonstration project conducted by the National Forum on College-Level Learning and funded by The Pew Charitable Trusts.*

Based on the results of the project, the learning category is being constructed like the other performance categories in *Measuring Up*, with indicators that are grouped in several themes, each of which is weighted (see parentheses) and reflects a particular dimension of state performance:

1. Abilities of the College-Educated Population (25%). This cluster of indicators examines the proportion of college-educated residents who achieve high levels of literacy. For the 2004 demonstration, the data used are the same as those included in the benefits category and are based on the 1992 National Adult Literacy Survey (NALS) for citizens aged 25 to 64, updated through the 2000 census. The NALS assessment poses real-world tasks or problems that require respondents to read and interpret texts (prose), to obtain or act on information contained in tabular or graphic displays (document), and to understand numbers or graphs and perform calculations (quantitative).

2. Institutional Contributions to Educational Capital (25%). The indicators in this area reflect the contributions to a state's stock of “educational capital” by examining the proportion of the state's college graduates (from two- and four-

Learning	Louisiana
Literacy Levels of the State's Residents (25%)

Writing	?
<i>From two-year colleges</i>	
Reading	?
Quantitative skills	?
Locating information	?
Writing	?

Note: Measures included under the first two clusters are available nationally and can be calculated for all 50 states. Measures included in the third will require special data-collection efforts similar to those undertaken by the five demonstration project states in 2004.

year institutions) ready for advanced practice. For the 2004 demonstration, the measures are based on available records for college graduates within each state who have demonstrated their readiness for advanced practice by (a) passing a national examination required to enter a licensed profession such as nursing or physical therapy, (b) earning a competitive score on a nationally recognized graduate admissions examination such as the Graduate Record Examination (GRE) or the Medical College Admissions Test (MCAT), or (c) passing a teacher licensure examination in the state in which they graduated. These measures are presented as a proportion of total bachelor's and associate's degrees granted in the state during the time period.

1. What are the abilities of the college-educated population?

2. To what extent do colleges and universities educate students to be capable of contributing to the workforce?

3. How well can graduates of two- and four-year colleges and universities perform complex problem-solving tasks?

3. Performance of College Graduates (50%). These indicators examine how well the graduates of the state's two- and four-year colleges and universities can perform complex tasks related to academic and real-world problem-solving situations. For the 2004 demonstration, the measures consist of two sets of assessments, the Collegiate Learning Assessment (CLA) for four-year students and the ACT Work Keys assessment for two-year students. The CLA is an innovative examination that poses real-world tasks that a student is asked to understand and solve. For example, students could be asked to draw scientific conclusions, examine historical evidence, or develop a persuasive essay. The ACT Work Keys examines what students can do with what they know. Students might be asked to extract information from documents and instructions, or use mathematical concepts such as probability or estimation in real-world settings. The Work Keys writing assessment requires students to prepare an extended essay.

* A report on the results and lessons of the five-state demonstration project will be released in November.

State Context	Louisiana	State Rank

Average Tuition (2002-03)		
Public 4-year institutions	\$3,190	
Public 2-year institutions	\$1,226	
Private 4-year institutions	\$18,417	
State and Local Appropriations for Higher Education		
Per \$1,000 of personal income, FY 2004	\$9	
Per capita, FY 2004	\$244	
% change, FY 1994-2004		94%

Share of State Appropriations

Ethnic Distribution (%)

Attainment of College Degrees in United States and Top Country, 25- to 34-year-olds (2000)

Note: These two charts compare performance in the U.S. to the performance of the top country, which receives a score of 100.

* This index, created by the Progressive Policy Institute, measures the extent to which a state is participating in knowledge-based industries. A higher score means increased participation.

Note: Percentages might not add to 100 due to rounding.

QUESTIONS & ANSWERS

Q: Who is being graded in this report card, and why?

A: *Measuring Up 2004* grades states, not individual colleges or universities, on their performance in higher education. The states are responsible for preparing students for higher education through sound K–12 systems, and they provide most of the public financial support—\$69 billion currently—for colleges and universities. Through their oversight of public colleges and universities, state leaders affect the kind and number of programs available in the state. They determine the limits of financial support and often influence tuition and fees for public colleges and universities. They determine how much state-based financial aid to make available to students and their families, which affects students attending private as well as public colleges and universities.

Q: How are states graded?

A: The report card grades states in six performance categories: academic preparation, participation, affordability, completion, benefits, and learning. Each category is made up of several indicators, or quantitative measures—a total of 35 in the first five categories. Grades are calculated based on each state's performance on these indicators, relative to other states. *Measuring Up 2004* draws its data from the most recent public information available. Most of the data in *Measuring Up 2004* is from 2002 and 2003.

In the affordability category, *Measuring Up 2004* reflects the major changes in tuition and financial aid that occurred in 2003. In addition, each state's performance is now calculated in relation to the performance of top states a decade ago—rather than in relation to top states' current performance, as is the case with other graded categories. This change creates

a more stable basis for states to assess their performance in affordability, which is the most volatile of the graded categories.

In the learning category, *Measuring Up 2004* reports information about five states (Illinois, Kentucky, Nevada, Oklahoma, and South Carolina) that participated in a pilot project on measuring learning. This report card gives these states a “Plus” for their efforts in assessing and measuring learning; however, all other states continue to receive an “Incomplete” in this category, as there is no information available to make state-by-state comparisons.

All data used to grade states in *Measuring Up 2004* were collected from national, reliable sources, including the U.S. Census and the U.S. Department of Education. All data are the most current available for state-by-state comparisons, are in the public domain, and were collected in ways that allow for effective comparisons among the states. The *Technical Guide* (available at www.highereducation.org) has information about sources used in *Measuring Up 2004*.

Q: What information is provided but not graded?

A: The state report cards highlight important gaps in college opportunities for various income and ethnic groups, and they identify improvements and setbacks in each state's performance over the past decade. In addition, the series of indicators measuring adult literacy skills (in the benefits category) is not being used to calculate grades in *Measuring Up 2004* because the data have not been updated in 12 years. As a temporary placeholder for these indicators, the National Center commissioned a study to estimate adult skill levels based on the 2000 Census. These estimates are provided in the charts found in the state report cards, but they are not used to calculate any grades.

What do the arrows mean?

The state has improved on more than half of the indicators in the category.

The state has improved on some, but no more than half, of the indicators in the category.

The state has declined on every indicator in the category.

The National Center for Public Policy and Higher Education

As an independent, nonprofit, nonpartisan organization, the National Center for Public Policy and Higher Education promotes public policies that enhance Americans' opportunities to pursue and achieve high-quality education and training beyond high school. Formed in 1998, the National Center is not affiliated with any institution of higher education, with any political party, or with any government agency. It conducts independent research and analyses of pressing policy issues facing the states and the nation regarding opportunity and achievement in higher education—including two- and four-year, public and private, for-profit and nonprofit institutions. The National Center communicates performance results and key findings to the public, to civic, business, and higher education leaders, and to state and federal leaders who are poised to improve public policies regarding higher education.

For further information about the National Center and its publications, visit www.highereducation.org.
