

**MEASURING UP**

**2004**

**THE STATE REPORT CARD  
ON HIGHER EDUCATION**

**WYOMING**

**THE NATIONAL CENTER FOR  
PUBLIC POLICY AND  
HIGHER EDUCATION**

# WHAT IS MEASURING UP?

---

This state report card is derived from *Measuring Up 2004*, the national report card for higher education. Its purpose is to provide the public and policymakers with information to assess and improve postsecondary education in each state. *Measuring Up 2004* is the third in a series of biennial report cards.

*Measuring Up 2004* evaluates states on their performance in higher education because it is the states that are primarily responsible for educational access and quality in the United States. In this report card, “higher education” refers to all education and training beyond high school, including all public and private, two- and four-year, for-profit and nonprofit institutions.

The report card grades states in six overall performance categories:

■ **Preparation:** How adequately are students in each state being prepared for education and training beyond high school?

■ **Participation:** Do state residents have sufficient opportunities to enroll in education and training beyond high school?

■ **Affordability:** How affordable is higher education for students and their families?

■ **Completion:** Do students make progress toward and complete their certificates and degrees in a timely manner?

■ **Benefits:** What benefits does the state receive as a result of having a highly educated population?

■ **Learning:** What is known about student learning as a result of education and training beyond high school?

Each state receives a grade in each performance category, and the grades are based on the state’s performance on several indicators, or quantitative measures, in each category. Most states receive an “Incomplete” in learning because there are no common benchmarks that allow for state-by-state comparisons in learning. Five states, however, receive a “Plus” in learning to highlight their work in developing measures to evaluate the state’s educational capital—that is, the reservoir of high-level knowledge and skills

that the state’s population has attained. For more information about this, see page 12 of this state report card.

In four of the performance categories—preparation, participation, completion, and benefits—grades are calculated by comparing each state’s current performance to that of the best-performing states. This provides a basis for assessing and comparing each state’s performance in the national context and encourages each state to “measure up” to the highest performing states.

In the affordability category, however, the nation as a whole is “measuring down.” That is, even in the best-performing states, higher education has become *less* rather than *more* affordable when the costs of attending college are considered in relation to family income. As a result, grades in the affordability category are calculated by comparing each state’s current results to the performance of the top states *a decade ago*. This enables policymakers to examine their state’s results in relation to other states, while also encouraging improved performance over time. A glance at the table of state grades on page 15 reveals that the affordability category is the only one in which no state receives an A.

*Measuring Up 2004* also compares each state’s current results with its own performance a decade ago. Although this historical information is not graded, it is offered to allow states to examine their improvements and declines in performance. In gathering information for this period, information from 1992—or the closest year available—is compared with the most recently available data. All information was collected from national, reliable sources, including the U.S. Census Bureau and the U.S. Department of Education. (For more information about grading, data collection, and sources, please see the technical report at [www.highereducation.org](http://www.highereducation.org).)

This state report card begins by summarizing the state’s performance today compared with ten years ago, and by presenting key policy questions that these results suggest for the state. Next, the state’s performance in each category is described in greater detail, followed by additional contextual information.

---

## A Snapshot of Improvement Over the Past Decade

High school graduates are, in general, better prepared for college today than their peers were a decade ago. However, most states, and the nation as a whole, have made little progress in translating these gains into improvements at the college level.

**Preparation:** 44 states improved on more than half of the indicators; 6 improved on some of the indicators.

**Participation:** 8 states improved on more than half of the indicators; 23 improved on some of the indicators; 19 declined on every indicator.

**Affordability:** 2 states improved on more than half of the indicators; 31 improved on some of the indicators; 17 declined on every indicator.

**Completion:** 37 states improved on more than half of the indicators; 9 improved on some of the indicators; 4 declined on every indicator.

**Benefits:** 41 states improved on more than half of the indicators; 8 improved on some of the indicators; 1 declined on every indicator.

**Learning:** 45 states receive an “Incomplete”; 5 states (Illinois, Kentucky, Nevada, Oklahoma, and South Carolina) receive a “Plus.”

For more information about improvement, please see *Measuring Up 2004: The National Report Card on Higher Education* at [www.highereducation.org](http://www.highereducation.org).

Wyoming has improved over the past decade in preparing students for college. However, the state has not seen commensurate gains in enrolling young adults or working-age adults in college-level education or training. Wyoming has lost ground in providing students with an affordable higher education, which may undermine its efforts to send clear messages to them about the importance of being prepared academically for college.

### Strengths

#### Preparation

- Compared with other states, a large percentage of Wyoming high school students enroll in upper-level math.

- The state's 8th graders perform well on national exams in math, science, and reading. Performance on the reading exams has improved over the past decade, in contrast to a national decline on this measure.

- Over 70% of secondary school students are taught by qualified teachers. This percentage has increased substantially over the past decade, keeping pace with national improvements on this measure.

#### Participation

- Compared with other states, a large proportion of working-age adults enroll in higher education. However, Wyoming has had a substantial decline on this measure over the decade—larger than the nationwide decline.

#### Completion

- Large proportions of freshmen return for their second year at the state's two- and four-year colleges and university. Over the past decade, Wyoming has been among the top states in improvement on these measures.

- A large proportion of students at four-year institutions receive a bachelor's degree within six years of enrolling. Wyoming's improvement on this measure is among the best in the nation.

### Weaknesses

#### Preparation

- Relative to other states, a small proportion of Wyoming high school students enroll in upper-level science.

- The performance of 8th graders on national writing exams is fairly low.

- Small proportions of 11th and 12th graders take and score well on Advanced Placement and college entrance exams.

#### Participation

- Compared with other states, the likelihood of 9th graders enrolling in college within four years is only fair. A small proportion of students graduate from high school, and of those who do, few enroll in college.

**Affordability**

■ Net college costs for low- and middle-income students to attend the state's two- or four-year colleges and university represent about a third of their annual family income. These families earn on average \$20,867 annually. (Net college costs equal tuition, room, and board minus financial aid.)

**Benefits**

■ Compared with top states, a small proportion of Wyoming's residents have a bachelor's degree.

**Policy Questions**

■ Can Wyoming increase the number of students who finish high school within four years?

■ Given Wyoming's improving performance in preparing students for higher education, can the state develop policies to increase participation in college?

■ Can Wyoming develop a financial aid policy focused on financial need for college-qualified students?

■ Can the state improve its finance policies (for example, by linking appropriations, tuition, and financial aid) to make higher education more affordable?

2004  
Grade

Improvement  
Over Decade

*Despite notable improvement over the past decade, Wyoming has struggled to prepare students to succeed in college. This year Wyoming receives a C+ in preparation because other states performed better.*

## Graded Information

■ Compared with other states, a large proportion (51%) of high school students in Wyoming are enrolled in upper-level math, but a small proportion (25%) are enrolled in upper-level science.

■ A small proportion (23%) of 8th graders take algebra.

■ Eighth graders perform well on national assessments in math, science, and reading; however, their performance in writing is fairly low.

■ Compared with their peers in other states, low-income 8th graders perform fairly well on national assessments in math.

■ Extremely small proportions of 11th and 12th graders score well on Advanced Placement tests, and fairly small proportions score well on college entrance exams.

■ Seventy-two percent of secondary school students are taught by qualified teachers, which compares well with top states.

## Change in Graded Measures

■ Over the past decade, the proportion of high school students enrolled in upper-level science has increased substantially, although Wyoming's current performance on this measure is poor compared with other states.

PREPARATION	WYOMING		Top States 2004
	A Decade Ago	2004	
<b>High School Completion (20%)</b>			
18- to 24-year-olds with a high school credential	92%	88%*	94%
<b>K-12 Course Taking (35%)</b>			
9th to 12th graders taking at least one upper-level math course	41%	51%	59%
9th to 12th graders taking at least one upper-level science course	19%	25%	41%
8th grade students taking algebra	24%	23%	35%
12th graders taking at least one upper-level math course	n/a	51%	66%
<b>K-12 Student Achievement (35%)</b>			
8th graders scoring at or above "proficient" on the national assessment exam:			
in math	21%	32%	36%
in reading	29%	34%	39%
in science	34%	36%	42%
in writing	23%	28%	41%
Low-income 8th graders scoring at or above "proficient" on the national assessment exam in math	11%	18%	23%
Number of scores in the top 20% nationally on SAT/ACT college entrance exam per 1,000 high school graduates	140	156	227
Number of scores that are 3 or higher on an Advanced Placement subject test per 1,000 high school juniors and seniors	26	49	219
<b>Teacher Quality (10%)</b>			
<i>7th to 12th graders taught by teachers with a major in their subject</i>	59%	72%	81%

\*Eighty percent of 18- to 24-year-olds have a regular high school diploma; 8% have a GED.  
Note: Indicators in italics are new for 2004.

- During the same period, the percentage of 8th graders performing well on national assessments in math has increased.
- Over the past few years, the percentage of 8th graders performing well on national assessments in reading has increased by 17%, in contrast to a national decline of 3% on this measure.
- The percentage of secondary school students taught by qualified teachers has increased substantially over the past decade.

**Other Key Facts**

About 15% of children under age 18 live in poverty, compared with a national rate of 17%.

The preparation category measures how well a state's K–12 schools prepare students for education and training beyond high school. The opportunities that residents have to enroll in and benefit from higher education depend heavily on the performance of their state's K–12 educational system.

2004  
Grade

Improvement  
Over Decade

**B**

*Wyoming, over the past decade, has seen a drop-off in the number of students enrolling in higher education. Despite that decline, Wyoming earns a B in participation this year.*

## Graded Information

■ Compared with other states, the chance of Wyoming high school students enrolling in college by age 19 is only fair, because few students graduate from high school and enroll in college.

■ The percentage of working-age adults (ages 25 to 49) who are enrolled part-time in education or training beyond high school is fairly large.

## Change in Graded Measures

■ The percentage of working-age adults who are enrolled part-time in college-level education or training has declined by 20% over the past decade, exceeding the nationwide decline of 11%.

PARTICIPATION	WYOMING		Top States 2004
	A Decade Ago	2004	
<b>Young Adults (60%)</b>			
Chance for college by age 19	39%	39%	52%
18- to 24-year-olds enrolled in college	42%	31%	40%
<b>Working-Age Adults (40%)</b>			
25- to 49-year-olds enrolled part-time in any type of postsecondary education	5.4%	4.3%	5.4%

## Other Key Facts

■ The state's population is projected to grow by 22% from 2000 to 2015, far exceeding the national rate of 13%. During approximately the same period, the number of high school graduates is projected to decline by 23%.

■ About 9% of the adult population has less than a high school diploma or its equivalent, compared with 14% of adults nationwide.

■ In Wyoming, 144 more students are leaving the state than are entering to attend college. About 34% of Wyoming high school graduates who go to college attend college out of state.

The participation category addresses the opportunities for state residents to enroll in higher education. A strong grade in participation generally indicates that state residents have high individual expectations for education and that the state provides enough spaces and types of educational programs for its residents.

2004  
Grade

Improvement  
Over Decade

Over the past decade, Wyoming has seen a striking decline in its provision of affordable higher education opportunities. This year Wyoming is one of many states to receive an F in affordability.

## Graded Information

■ Compared with top-performing states, families in Wyoming devote a fairly large share of family income, even after financial aid, to attend public two- and four-year colleges and universities, which enroll 94% of college students in the state.

■ The state's investment in need-based financial aid is very low when compared with top-performing states, and Wyoming does not offer low-priced college opportunities.

■ Undergraduate students borrowed on average \$2,898 in 2003, one of the lowest averages in the nation.

## Change in Graded Measures

■ Over the past decade, the share of income needed to pay for college expenses after financial aid has increased from 16% to 21% at community colleges and from 16% to 24% at public four-year institutions.

## Other Key Facts

■ In Wyoming, 62% of students are enrolled in community colleges and 32% in public four-year colleges and universities.

AFFORDABILITY	WYOMING		Top States A Decade Ago
	A Decade Ago	2004	
<b>Family Ability to Pay (50%)</b>			
Percent of income (average of all income groups) needed to pay for college expenses minus financial aid:			
at community colleges	16%	21%	15%
at public 4-year colleges/universities	16%	24%	16%
at private 4-year colleges/universities	n/a	n/a	32%
<b>Strategies for Affordability (40%)</b>			
State investment in need-based financial aid as compared to the federal investment	2%	1%	89%
At lowest-priced colleges, the share of income that the poorest families need to pay for tuition	8%	12%	7%
<b>Reliance on Loans (10%)</b>			
Average loan amount that undergraduate students borrow each year	\$2,642	\$2,898	\$2,619

Note: In the affordability category, the lower the figures the better the performance for all indicators except for "State investment in need-based financial aid."

The affordability category measures whether students and families can afford to pay for higher education, given income levels, financial aid, and the types of colleges and universities in the state.

A CLOSER LOOK AT FAMILY ABILITY TO PAY	Average family income	Community colleges		Public 4-year colleges/universities		Private 4-year colleges/universities	
		Net college cost*	Percent of income needed to pay net college cost	Net college cost*	Percent of income needed to pay net college cost	Net college cost*	Percent of income needed to pay net college cost
<b>Income groups used to calculate 2004 family ability to pay</b>							
20% of the population with the lowest income	<b>\$13,000</b>	<b>\$6,358</b>	<b>49%</b>	<b>\$6,932</b>	<b>53%</b>	n/a	n/a
20% of the population with lower-middle income	<b>\$28,734</b>	<b>\$6,779</b>	<b>24%</b>	<b>\$7,438</b>	<b>26%</b>	n/a	n/a
20% of the population with middle income	<b>\$44,000</b>	<b>\$7,030</b>	<b>16%</b>	<b>\$7,856</b>	<b>18%</b>	n/a	n/a
20% of the population with upper-middle income	<b>\$62,630</b>	<b>\$7,106</b>	<b>11%</b>	<b>\$8,054</b>	<b>13%</b>	n/a	n/a
20% of the population with the highest income	<b>\$96,819</b>	<b>\$7,099</b>	<b>7%</b>	<b>\$8,129</b>	<b>8%</b>	n/a	n/a
<b>40% of the population with the lowest income</b>	<b>\$20,867</b>	<b>\$6,569</b>	<b>31%</b>	<b>\$7,185</b>	<b>34%</b>	n/a	n/a

\*Net college cost equals tuition, room, and board, minus financial aid.

Those who are striving to reach or stay in the middle class—the 40% of the population with the lowest incomes—earn on average \$20,867 each year.

■ If a student from such a family were to attend a community college in the state, their net cost to attend college would represent about 31% of their income annually:

Tuition, room, and board:	\$7,159
Financial aid received:	-\$ 590
Net college cost:	\$6,569
Percent of income:	31%

■ If the same student were to attend a public four-year college in the state, their net cost to attend college would represent about 34% of their income annually:

Tuition, room, and board:	\$8,636
Financial aid received:	-\$1,451
Net college cost:	\$7,185
Percent of income:	34%

### Note

The numbers shown for tuition, room, and board minus financial aid may not exactly equal net college cost due to rounding.

2004  
Grade

Improvement  
Over Decade

Over the past decade, Wyoming has seen a notable improvement in the number of students who earn their certificates or degrees in a timely manner. Wyoming receives a B+ in completion this year.

## Graded Information

■ Compared with other states, a large percentage (55%) of first-year community college students return for their second year.

■ At four-year colleges and universities, the percentage of freshmen who return for their sophomore year is very large (78%).

■ A large percentage of first-time, full-time college students complete a bachelor's degree within six years of entering college.

■ In addition, a very large proportion of students earn certificates and degrees relative to the number enrolled.

## Change in Graded Measures

■ Over the past decade, the percentage of first-year community college students returning for their second year has increased, placing Wyoming among the top ten states in improvement on this measure.

COMPLETION	WYOMING		Top States 2004
	A Decade Ago	2004	
<b>Persistence (20%)</b>			
1st year community college students returning their second year	50%	55%	63%
Freshmen at 4-year colleges/universities returning their sophomore year	70%	78%	84%
<b>Completion (80%)</b>			
First-time, full-time students completing a bachelor's degree within 6 years of college entrance	45%	54%	64%
Certificates, degrees, and diplomas awarded at all colleges and universities per 100 undergraduate students	17	19	21

■ During the same period, Wyoming has been among the fastest improving states in the percentage of freshmen at four-year colleges and universities returning for their sophomore year.

■ Over the past few years, Wyoming has been among the fastest improving states in the percentage of first-time, full-time college students completing a bachelor's degree within six years of enrolling in college.

## Other Key Facts

■ During the past decade, the gap has narrowed between whites and Hispanics in the proportion of students completing certificates and degrees relative to the number enrolled. The proportion of Hispanic students receiving certificates and degrees has increased from 9 to 22 per 100 enrolled.

The completion category addresses whether students continue through their educational programs and earn certificates or degrees in a timely manner. Certificates and degrees from one- and two-year programs as well as the bachelor's degree are included.

2004  
Grade

Improvement  
Over Decade

Despite improvement over the past decade, Wyoming still does not reap many of the benefits of having a highly educated population. This year Wyoming receives a D in benefits.

## Graded Information

■ Compared with other states, a small proportion of residents have a bachelor's degree, and this substantially weakens the state economy.

■ However, residents contribute substantially to the civic good, as measured by charitable giving and voting.

## Change in Graded Measures

■ Over the past decade, the economic benefits that Wyoming enjoys as a result of the percentage of the population with a bachelor's degree have decreased substantially (by 32%), in contrast to a nationwide increase of 18%.

## Other Key Facts

■ If all ethnic groups had the same educational attainment and earnings as whites, total personal income in the state would be about \$76 million higher, and the state would realize an estimated \$27 million in additional tax revenues.

■ In 2002, Wyoming scored 46 on the New Economy Index, compared to a nationwide score of 60. The New Economy Index, developed by the Progressive Policy Institute, measures the extent to which states are participating in knowledge-based industries.

BENEFITS	WYOMING		Top States 2004
	A Decade Ago	2004	
<b>Educational Achievement (37.5%)</b>			
Population aged 25 to 65 with a bachelor's degree or higher	22%	23%	36%
<b>Economic Benefits (31.25%)</b>			
Increase in total personal income as a result of the percentage of the population holding a bachelor's degree	6%	4%	12%
Increase in total personal income as a result of the percentage of the population with some college (including an associate's degree), but not a bachelor's degree	-1%	1%	3%
<b>Civic Benefits (31.25%)</b>			
Residents voting in national elections	59%	58%	60%
Of those who itemize on federal income taxes, the percentage declaring charitable gifts	83%	79%	92%
<i>Increase in volunteering rate as a result of college education</i>	n/a	17%	22%
<b>Adult Skill Levels (0%)*</b>			
Adults demonstrating high-level literacy skills:			
quantitative	27%	31%	33%
prose	26%	30%	33%
document	22%	25%	28%

\*Adult Skill Levels for 2004 are estimated and are not used to calculate grades.

Note: Indicators in italics are new for 2004.

■ Policymakers and state residents do not have access to important information about high-level literacy skills because the state has declined to participate in the national literacy survey.

The benefits category measures the economic and societal benefits that the state receives as the result of having well educated residents.

2004  
Grade

*Like most states, Wyoming received an Incomplete in learning because there are no comparable data that would allow for meaningful state-by-state comparisons in learning. The Incomplete in this category highlights a gap in our ability to measure each state's educational capital—the reservoir of high-level knowledge and skills that benefit each state.*

*Measuring Up 2004* gives a “Plus” in learning to five states (Illinois, Kentucky, Nevada, Oklahoma, and South Carolina) that have developed learning measures through their participation in a national demonstration project conducted by the National Forum on College-Level Learning and funded by The Pew Charitable Trusts.\*

Based on the results of the project, the learning category is being constructed like the other performance categories in *Measuring Up*, with indicators that are grouped in several themes, each of which is weighted (see parentheses) and reflects a particular dimension of state performance:

**1. Abilities of the College-Educated Population (25%).** This cluster of indicators examines the proportion of college-educated residents who achieve high levels of literacy. For the 2004 demonstration, the data used are the same as those included in the benefits category and are based on the 1992 National Adult Literacy Survey (NALS) for citizens aged 25 to 64, updated through the 2000 census. The NALS assessment poses real-world tasks or problems that require respondents to read and interpret texts (prose), to obtain or act on information contained in tabular or graphic displays (document), and to understand numbers or graphs and perform calculations (quantitative).

**2. Institutional Contributions to Educational Capital (25%).** The indicators in this area reflect the contributions to a state's stock of “educational capital” by examining the proportion of the state's college graduates (from two- and four-

Learning	Wyoming

<i>From two-year colleges</i>	
Reading	?
Quantitative skills	?
Locating information	?
Writing	?

Note: Measures included under the first two clusters are available nationally and can be calculated for all 50 states. Measures included in the third will require special data-collection efforts similar to those undertaken by the five demonstration project states in 2004.

year institutions) ready for advanced practice. For the 2004 demonstration, the measures are based on available records for college graduates within each state who have demonstrated their readiness for advanced practice by (a) passing a national examination required to enter a licensed profession such as nursing or physical therapy, (b) earning a competitive score on a nationally recognized graduate admissions examination such as the Graduate Record Examination (GRE) or the Medical College Admissions Test (MCAT), or (c) passing a teacher licensure examination in the state in which they graduated. These measures are presented as a proportion of total bachelor's and associate's degrees granted in the state during the time period.

1. What are the abilities of the college-educated population?

2. To what extent do colleges and universities educate students to be capable of contributing to the workforce?

3. How well can graduates of two- and four-year colleges and universities perform complex problem-solving tasks?

**3. Performance of College Graduates (50%).** These indicators examine how well the graduates of the state's two- and four-year colleges and universities can perform complex tasks related to academic and real-world problem-solving situations. For the 2004 demonstration, the measures consist of two sets of assessments, the Collegiate Learning Assessment (CLA) for four-year students and the ACT Work Keys assessment for two-year students. The CLA is an innovative examination that poses real-world tasks that a student is asked to understand and solve. For example, students could be asked to draw scientific conclusions, examine historical evidence, or develop a persuasive essay. The ACT Work Keys examines what students can do with what they know. Students might be asked to extract information from documents and instructions, or use mathematical concepts such as probability or estimation in real-world settings. The Work Keys writing assessment requires students to prepare an extended essay.

\* A report on the results and lessons of the five-state demonstration project will be released in November.

State Context	Wyoming	State Rank
Population (2003)	501,242	50
Gross state product (2001, in millions)	\$20,418	48
Leading Indicators	Wyoming	U.S.

## Share of State Appropriations

## Ethnic Distribution (%)

## Attainment of College Degrees in United States and Top Country, 25- to 34-year-olds (2000)

Note: These two charts compare performance in the U.S. to the performance of the top country, which receives a score of 100.

\* This index, created by the Progressive Policy Institute, measures the extent to which a state is participating in knowledge-based industries. A higher score means increased participation.

Note: Percentages might not add to 100 due to rounding.

## QUESTIONS & ANSWERS

### **Q: Who is being graded in this report card, and why?**

**A:** *Measuring Up 2004* grades states, not individual colleges or universities, on their performance in higher education. The states are responsible for preparing students for higher education through sound K–12 systems, and they provide most of the public financial support—\$69 billion currently—for colleges and universities. Through their oversight of public colleges and universities, state leaders affect the kind and number of programs available in the state. They determine the limits of financial support and often influence tuition and fees for public colleges and universities. They determine how much state-based financial aid to make available to students and their families, which affects students attending private as well as public colleges and universities.

### **Q: How are states graded?**

**A:** The report card grades states in six performance categories: academic preparation, participation, affordability, completion, benefits, and learning. Each category is made up of several indicators, or quantitative measures—a total of 35 in the first five categories. Grades are calculated based on each state's performance on these indicators, relative to other states. *Measuring Up 2004* draws its data from the most recent public information available. Most of the data in *Measuring Up 2004* is from 2002 and 2003.

In the affordability category, *Measuring Up 2004* reflects the major changes in tuition and financial aid that occurred in 2003. In addition, each state's performance is now calculated in relation to the performance of top states a decade ago—rather than in relation to top states' current performance, as is the case with other graded categories. This change creates

a more stable basis for states to assess their performance in affordability, which is the most volatile of the graded categories.

In the learning category, *Measuring Up 2004* reports information about five states (Illinois, Kentucky, Nevada, Oklahoma, and South Carolina) that participated in a pilot project on measuring learning. This report card gives these states a “Plus” for their efforts in assessing and measuring learning; however, all other states continue to receive an “Incomplete” in this category, as there is no information available to make state-by-state comparisons.

All data used to grade states in *Measuring Up 2004* were collected from national, reliable sources, including the U.S. Census and the U.S. Department of Education. All data are the most current available for state-by-state comparisons, are in the public domain, and were collected in ways that allow for effective comparisons among the states. The *Technical Guide* (available at [www.highereducation.org](http://www.highereducation.org)) has information about sources used in *Measuring Up 2004*.

### **Q: What information is provided but not graded?**

**A:** The state report cards highlight important gaps in college opportunities for various income and ethnic groups, and they identify improvements and setbacks in each state's performance over the past decade. In addition, the series of indicators measuring adult literacy skills (in the benefits category) is not being used to calculate grades in *Measuring Up 2004* because the data have not been updated in 12 years. As a temporary placeholder for these indicators, the National Center commissioned a study to estimate adult skill levels based on the 2000 Census. These estimates are provided in the charts found in the state report cards, but they are not used to calculate any grades.

#### What do the arrows mean?

The state has improved on more than half of the indicators in the category.

The state has improved on some, but no more than half, of the indicators in the category.

The state has declined on every indicator in the category.

## The National Center for Public Policy and Higher Education

As an independent, nonprofit, nonpartisan organization, the National Center for Public Policy and Higher Education promotes public policies that enhance Americans' opportunities to pursue and achieve high-quality education and training beyond high school. Formed in 1998, the National Center is not affiliated with any institution of higher education, with any political party, or with any government agency. It conducts independent research and analyses of pressing policy issues facing the states and the nation regarding opportunity and achievement in higher education—including two- and four-year, public and private, for-profit and nonprofit institutions. The National Center communicates performance results and key findings to the public, to civic, business, and higher education leaders, and to state and federal leaders who are poised to improve public policies regarding higher education.

For further information about the National Center and its publications, visit [www.highereducation.org](http://www.highereducation.org).
