

MEASURING UP

2006

**THE STATE REPORT CARD
ON HIGHER EDUCATION**

LOUISIANA

**THE NATIONAL CENTER FOR
PUBLIC POLICY AND
HIGHER EDUCATION**

WHAT IS MEASURING UP?

The purpose of this state report card is to provide the general public and policymakers with information they can use to assess and improve postsecondary education in each state. *Measuring Up 2006* is the fourth in a series of biennial report cards.

Measuring Up 2006 evaluates states on their performance in higher education because it is the states that are primarily responsible for educational access and quality in the United States. In this report card, “higher education” refers to all education and training beyond high school, including all public and private, two- and four-year, for-profit and nonprofit institutions.

The report card grades states in six overall performance categories:

- **Preparation:** How adequately does the state prepare students for education and training beyond high school?
- **Participation:** Do state residents have sufficient opportunities to enroll in education and training beyond high school?
- **Affordability:** How affordable is higher education for students and their families?
- **Completion:** Do students make progress toward and complete their certificates or degrees in a timely manner?
- **Benefits:** What benefits does the state receive from having a highly educated population?
- **Learning:** What is known about student learning as a result of education and training beyond high school?

Each state receives a letter grade in each performance category. Each grade is based on the state’s performance on several indicators, or quantitative measures, in that category.

Measuring Up 2006 is the first edition that includes data in the Learning category for all 50 states on the extent to which colleges and universities prepare students to contribute to the workforce.

As in *Measuring Up 2004*, most states in 2006 receive an “Incomplete” in Learning due to the lack of reported information.

This year, however, nine states (Illinois, Kentucky, Maryland, Massachusetts, Missouri, Nevada, New York, Oklahoma, and South Carolina) receive a “Plus.” For more information on these states and the Learning category, see page 12 of this state report card.

In four of the performance categories—Preparation, Participation, Completion, and Benefits—grades are calculated by comparing each state’s current performance to that of the best-performing states. This comparison provides a basis for evaluating each state’s performance within a national context and encourages each state to “measure up” to the highest-performing states.

In the Affordability category, however, the United States as a whole is “measuring down.” That is, even in the best-performing states, higher education has become *less* rather than *more* affordable when the costs of attending college are considered relative to family income. As a result, state grades in the Affordability category are calculated by comparing each state’s current performance with the performance of the best states in the early 1990s. This comparison allows policymakers to examine their state’s results relative to other states, while also encouraging improved performance over time. The Affordability category is the only one in which no state receives an A—the highest grade is a C–.

Measuring Up 2006 also compares each state’s current performance with its own performance in the early 1990s. Although this historical comparison is not graded, it is offered so that states can examine their trends in performance—both improvements and declines—over time. All data are drawn from reliable national sources. (For more information, please see the *Technical Guide for Measuring Up 2006* at www.highereducation.org.)

Measuring Up 2006 is the first edition that offers international comparisons that provide essential information on how well the United States and each of the 50 states are preparing residents with the knowledge and skills necessary to compete effectively in a global economy. Every state is compared with nations associated with the Organisation for Economic Co-operation and Development (OECD).

A Snapshot of Change Over Time

Academic preparation for college has continued to improve since the early 1990s, which is approximately when the most reliable data became available for meaningful comparisons. High school graduates are, in general, better prepared for college today than their peers were about a decade ago, as indicated by a greater proportion of high school students enrolled in a college-preparatory curriculum and scoring higher on national assessment examinations. Most states, however, and the United States as a whole, continue to show little progress in translating these gains into improvements at the college level.

Preparation: 45 states improved on more than half of the indicators; 5 improved on some of the indicators.

Participation: 8 states improved on more than half of the indicators; 28 improved on some of the indicators; 14 declined on most or all of the indicators.

Affordability: 1 state improved on more than half of the indicators; 32 improved on some of the indicators; 17 declined on most or all of the indicators.

Completion: 35 states improved on more than half of the indicators; 13 improved on some of the indicators; 2 declined on most or all of the indicators.

Benefits: 40 states improved on more than half of the indicators; 8 improved on some of the indicators; 2 declined on most or all of the indicators.

LOUISIANA

Louisiana's underperformance in educating its young population could limit the state's access to a competitive workforce and weaken its economy over time. Louisiana trails other states in graduating 9th graders from high school within four years and enrolling them in college by age 19, although the state has improved on these measures since the early 1990s. Of those students who do go to college, relatively few earn a certificate or degree. Weak performance in preparing students for college, coupled with Louisiana's high cost of a college education, present a barrier to enrollment for low- and middle-income families.

Over the past seven years, Louisiana has improved on the percentage of college students who earn a bachelor's degree within six years of enrolling, outpacing the national increase. When compared with leading states, however, this percentage remains small.

Strengths

Preparation

The percentage of low-income 8th graders performing well on national assessments in math has more than doubled, although the state still performs very poorly on this measure compared with leading states.

Participation

Over the past decade, Louisiana has increased the percentage of working-age adults enrolled part-time in college-level education or training, in contrast to a nationwide decline on this measure. Compared with leading states, however, this percentage remains small.

Completion

A large proportion of freshmen at four-year colleges and universities return for their sophomore year. This proportion has increased substantially over the past 15 years, and Louisiana has shown some of the greatest improvement among states on this measure.

What do the arrows mean?

- The state has improved on more than half of the indicators in the category.
- The state has improved on some, but no more than half, of the indicators in the category.
- The state has declined on most or all indicators.

Weaknesses

Preparation

- A very small proportion of 8th graders take algebra.
- Eighth graders are not well prepared to succeed in challenging high school courses. They perform very poorly on national assessments in math, science, reading, and writing, despite improvement on all these measures over the past several years.
- A very small proportion of Louisiana high school students enroll in upper-level science courses.
- Very small proportions of 11th and 12th graders take and score well on Advanced Placement tests and college entrance exams.
- Only one-half of secondary school students are taught by teachers with an undergraduate or graduate major in the subject they are teaching—the lowest percentage in the country.

Participation

- The chance that a high school student will enroll in college by age 19 remains low, despite one of the steepest increases among the states on this measure. The proportion of students graduating from high school within four years is among the lowest in the country.

- About 21% of adults do not have a high school diploma or its equivalent (compared with 14% of adults nationwide), reducing their likelihood of participating or succeeding in higher education.

- Among young adults (ages 18-24), whites are twice as likely as non-whites to be enrolled in college. In addition, young adults from high-income families are more than twice as likely to attend college as those from low-income families.

Affordability

- Net college costs for low- and middle-income students to attend public four-year colleges represent about one-third of their annual family income. (Net college costs equal tuition, room, and board after financial aid.) These families earn on average \$16,834 annually. These institutions enroll 62% of college students in the state.

Completion

- Louisiana performs poorly on international comparisons of enrolled students who complete certificate and degree programs.

Benefits

- Over the past 12 years, the gap has widened between whites and non-whites in the percentage who have a bachelor's degree.

2006
Grade

Change
Over Time

Despite improvement, Louisiana continues to lag most other states in preparing students to succeed in college. This year Louisiana is one of only two states to receive an F in preparation.

Graded Information

Compared with other states:

- A fairly small proportion (45%) of high school students in Louisiana are enrolled in upper-level math, and a very small proportion (23%) are enrolled in upper-level science.

- A very small proportion (5%) of 8th graders take algebra.

- Eighth graders perform very poorly on national assessments in math, science, reading, and writing, indicating that they are not well prepared to succeed in challenging high school courses. Louisiana is among the lowest-performing states in reading.

- Low-income 8th graders perform very poorly on national assessments in math.

- Very small proportions of 11th and 12th graders score well on college entrance exams. Likewise, very small proportions score well on Advanced Placement tests; Louisiana is the lowest-performing state on this measure.

- About half of secondary school students are taught by qualified teachers; Louisiana is the lowest-performing state on this measure.

Change in Graded Measures

- Over the past 13 years, the percentage of 8th graders performing well on national assessments in math has more than doubled. However, the state's current performance is very poor compared with other states.

PREPARATION	LOUISIANA		Top States 2006
	1992*	2006	
High School Completion (20%)			
18- to 24-year-olds with a high school credential	84%	86%†	94%
K-12 Course Taking (35%)			
9th to 12th graders taking at least one upper-level math course	43%	45%	64%
9th to 12th graders taking at least one upper-level science course	18%	23%	40%
8th grade students taking algebra	5%	5%	35%
12th graders taking at least one upper-level math course	n/a	n/a	66%
K-12 Student Achievement (35%)			
8th graders scoring at or above "proficient" on the national assessment exam:			
in math	7%	16%	38%
in reading	18%	20%	38%
in science	13%	19%	41%
in writing	12%	18%	41%
Low-income 8th graders scoring at or above "proficient" on the national assessment exam in math	3%	8%	22%
Number of scores in the top 20% nationally on SAT/ACT college entrance exam per 1,000 high school graduates	103	132	237
Number of scores that are 3 or higher on an Advanced Placement subject test per 1,000 high school juniors and seniors	23	28	217
Teacher Quality (10%)			
7th to 12th graders taught by teachers with a major in their subject	39%	51%	81%

*The indicators report data beginning in 1992 or the closest year for which reliable data are available. See the *Technical Guide for Measuring Up 2006*.

†Eighty-one percent of 18-24-year-olds have a regular high school diploma; 5% have a GED. The numbers shown for a regular high school diploma and a GED may not exactly equal the number for a high school credential due to rounding.

■ The percentage of 8th graders performing well on national assessments in science has increased substantially over the past nine years; however, Louisiana's current performance is very poor compared with other states.

■ Also, the percentage of 8th graders performing well on national assessments in writing has increased substantially. However, the state's current performance is very low relative to other states.

■ The percentage of low-income 8th graders performing well on national assessments in math has more than doubled over the past nine years, although the state still performs very poorly on this measure compared with other states.

■ The percentage of secondary school students taught by qualified teachers has increased substantially.

Other Key Facts

■ About 30% of children under age 18 live in poverty, compared with a national rate of 18%.

■ Policymakers and state residents do not have access to important information about 12th graders taking upper-level math because the state did not report the data by grade level.

The preparation category measures how well a state's K–12 schools prepare students for education and training beyond high school. The opportunities that residents have to enroll in and benefit from higher education depend heavily on the performance of their state's K–12 educational system.

2006
Grade

Change
Over Time

Louisiana continues to struggle in enrolling students in higher education. This year Louisiana receives a C- in participation.

Graded Information

Compared with other states:

- The chance of Louisiana high school students enrolling in college by age 19 is low, because few students graduate from high school and enroll in college. The proportion of students graduating from high school within four years is among the lowest in the country.

- A low percentage of working-age adults (ages 25 to 49) are enrolled part-time in college-level education or training.

Change in Graded Measures

Over the past decade:

- The chance of enrolling in college by age 19 has increased by 16%—one of the steepest increases among the states on this measure. Nonetheless, the state's current performance remains low when compared with other states.

- The percentage of working-age adults who are enrolled part-time in college-level education or training has increased by 1%, compared with a nationwide decline of 12%.

PARTICIPATION	LOUISIANA		Top States 2006
	1992*	2006	
Young Adults (60%)			
Chance for college by age 19	29%	33%	53%
18- to 24-year-olds enrolled in college	35%	29%	41%
Working-Age Adults (40%)			
25- to 49-year-olds enrolled part-time in any type of postsecondary education	3.1%	3.1%	5.1%

*The indicators report data beginning in 1992 or the closest year for which reliable data are available. See the *Technical Guide for Measuring Up 2006*.

Other Key Facts

- In Louisiana, white young adults (ages 18 to 24) are twice as likely to attend college as young adults from other ethnic groups.

- Young adults from high-income families are more than twice as likely as those from low-income families to attend college.

- The state's population is projected to grow by 4% from 2005 to 2020, well below the national rate of 14%. During approximately the same period, the number of high school graduates is projected to decrease by 11%.

- About 21% of the adult population has less than a high school diploma or its equivalent, compared with 14% of adults nationwide.

- In Louisiana, 2,662 more students are entering the state than are leaving to attend college. About 9% of Louisiana high school graduates who go to college attend college out of state.

The participation category addresses the opportunities for state residents to enroll in higher education. A strong grade in participation generally indicates that state residents have high individual expectations for education and that the state provides enough spaces and types of educational programs for its residents.

2006
Grade

Change
Over Time

Louisiana has made no notable progress in providing affordable higher education. Louisiana receives an F in affordability this year.

Graded Information

■ Compared with best-performing states, families in Louisiana devote a fairly large share of family income, even after financial aid, to attend public two-year colleges, and they devote a large share of family income to attend public four-year colleges and universities. These two sectors enroll 86% of Louisiana's college students.

■ The state's investment in need-based financial aid is very low when compared with top-performing states, and Louisiana does not offer low-priced college opportunities.

■ Undergraduate students borrowed on average \$3,349 in 2005.

Other Key Facts

■ In Louisiana, 24% of students are enrolled in community colleges and 62% in public four-year colleges and universities.

AFFORDABILITY	LOUISIANA		Top States In Early 1990s
	1992*	2006	
Family Ability to Pay (50%)			
Percent of income (average of all income groups) needed to pay for college expenses minus financial aid:			
at community colleges	22%	20%	15%
at public 4-year colleges/universities	24%	24%	16%
at private 4-year colleges/universities	88%	87%	32%
Strategies for Affordability (40%)			
State investment in need-based financial aid as compared to the federal investment	4%	1%	89%
At lowest-priced colleges, the share of income that the poorest families need to pay for tuition	18%	16%	7%
Reliance on Loans (10%)			
Average loan amount that undergraduate students borrow each year	\$2,875	\$3,349	\$2,619

*The indicators report data beginning in 1992 or the closest year for which reliable data are available. See the *Technical Guide for Measuring Up 2006*.

Note: In the affordability category, the lower the figures the better the performance for all indicators except for "State investment in need-based financial aid."

The affordability category measures whether students and families can afford to pay for higher education, given income levels, financial aid, and the types of colleges and universities in the state.

Financial Burden to Pay for College Varies Widely Among Different Income Families in the State

A CLOSER LOOK AT FAMILY ABILITY TO PAY	Average family income	Community colleges		Public 4-year colleges/universities		Private 4-year colleges/universities	
		Net college cost*	Percent of income needed to pay net college cost	Net college cost*	Percent of income needed to pay net college cost	Net college cost*	Percent of income needed to pay net college cost
Income groups used to calculate 2006 family ability to pay							
20% of the population with the lowest income	\$9,668	\$4,474	46%	\$5,191	54%	\$22,168	229%
20% of the population with lower-middle income	\$24,000	\$5,202	22%	\$6,190	26%	\$22,060	92%
20% of the population with middle income	\$38,967	\$5,845	15%	\$7,363	19%	\$21,772	56%
20% of the population with upper-middle income	\$60,460	\$6,005	10%	\$7,399	12%	\$21,520	36%
20% of the population with the highest income	\$104,300	\$6,040	6%	\$7,418	7%	\$22,008	21%
40% of the population with the lowest income	\$16,834	\$4,838	29%	\$5,691	34%	\$22,114	131%

*Net college cost equals tuition, room, and board, minus financial aid.

Those who are striving to reach or stay in the middle class—the 40% of the population with the lowest incomes—earn on average \$16,834 each year

■ If a student from such a family were to attend a community college in the state, their net cost to attend college would represent about 29% of their income annually:

Tuition, room, and board:	\$6,173
Financial aid received:	-\$ 1,335
Net college cost:	\$4,838
Percent of income:	29%

■ If the same student were to attend a public four-year college in the state, their net cost to attend college would represent about 34% of their income annually:

Tuition, room, and board:	\$8,344
Financial aid received:	-\$2,654
Net college cost:	\$5,691
Percent of income:	34%

Note

The numbers shown for tuition, room, and board minus financial aid may not exactly equal net college cost due to rounding.

2006
Grade

Change
Over Time

Despite substantial improvement, Louisiana lags many other states in the proportion of students earning a certificate or degree in a timely manner. This year Louisiana receives a C– in completion.

Graded Information

Compared with other states:

- Only a fair percentage (49%) of first-year students in community colleges return for their second year.
- At four-year colleges and universities, a high percentage (72%) of freshmen return for their sophomore year.
- However, a low percentage (39%) of first-time, full-time college students complete a bachelor's degree within six years of entering college.
- The proportion of students completing certificates and degrees, relative to the number enrolled, is only fair.

Change in Graded Measures

- Over the past 15 years, the percentage of freshmen at four-year colleges and universities returning for their sophomore year has increased substantially, making Louisiana one of the fastest-improving states on this measure.
- During the past seven years, the percentage of first-time, full-time college students earning a bachelor's degree within six years of enrolling in college has increased by 18%, compared with a nationwide increase of 6%. However, Louisiana's current performance on this measure remains low relative to other states.

COMPLETION	LOUISIANA		Top States 2006
	1992*	2006	
Persistence (20%)†			
1st year community college students returning their second year	n/a	49%	62%
Freshmen at 4-year colleges/universities returning their sophomore year	61%	72%	82%
Completion (80%)			
First-time, full-time students completing a bachelor's degree within 6 years of college entrance	33%	39%	64%
Certificates, degrees, and diplomas awarded at all colleges and universities per 100 undergraduate students	12	15	20

*The indicators report data beginning in 1992 or the closest year for which reliable data are available.

†2006 data may not be entirely comparable with data from previous years.

See the *Technical Guide for Measuring Up 2006*.

- In the past 12 years, the proportion of students completing certificates and degrees relative to the number enrolled has increased, with most of the growth in certificates awarded.

The completion category addresses whether students continue through their educational programs and earn certificates or degrees in a timely manner. Certificates and degrees from one- and two-year programs as well as the bachelor's degree are included.

2006
Grade

Change
Over Time

Louisiana continues to struggle in realizing the benefits that come from having a more highly educated population. This year Louisiana is one of only two states to receive a D+ in benefits, the lowest grade awarded.

Graded Information

Compared with other states:

■ A very small proportion of residents have a bachelor's degree, and this substantially weakens the state economy.

■ However, residents contribute substantially to the civic good, as measured by charitable giving, volunteerism, and voting.

Change in Graded Measures

■ Over the past 12 years, the economic benefits enjoyed by Louisiana as a result of having an educated population have decreased substantially (by 27%), in contrast to a nationwide increase of 21%.

Other Key Facts

■ If all ethnic groups had the same educational attainment and earnings as whites, total personal income in the state would be about \$4.6 billion higher.

■ Over the past 12 years, the gap between whites and other ethnic groups in the percentage who have a bachelor's degree has widened in Louisiana. Currently, white adults are twice as likely as adults from other ethnic groups to have a bachelor's degree. This is among the widest gaps in the country on this measure.

■ In 2002, Louisiana scored 46 on the New Economy Index, compared to a nationwide score of 60. The New

BENEFITS	LOUISIANA		Top States 2006
	1992*	2006	
Educational Achievement (37.5%)			
Population aged 25 to 65 with a bachelor's degree or higher	18%	22%	37%
Economic Benefits (31.25%)			
Increase in total personal income as a result of the percentage of the population holding a bachelor's degree	8%	6%	12%
Increase in total personal income as a result of the percentage of the population with some college (including an associate's degree), but not a bachelor's degree	2%	1%	3%
Civic Benefits (31.25%)			
Residents voting in national elections	60%	56%	64%
Of those who itemize on federal income taxes, the percentage declaring charitable gifts	90%	87%	91%
Increase in volunteering rate as a result of college education	n/a	20%	22%
Adult Skill Levels (0%)*			
Adults demonstrating high-level literacy skills:			
quantitative	14%	16%	33%
prose	13%	15%	33%
document	11%	13%	28%

*The indicators report data beginning in 1992 or the closest year for which reliable data are available. See the *Technical Guide for Measuring Up 2006*.

†These are estimates from *Measuring Up 2004* and are not used to calculate grades. New data will be available in fall 2006.

Economy Index, developed by the Progressive Policy Institute, measures the extent to which states are participating in knowledge-based industries.

■ Policymakers and state residents do not have access to important information about high-level literacy skills because the state has declined to participate in the national literacy survey.

The benefits category measures the economic and societal benefits that the state receives as the result of having well educated residents.

2006
Grade

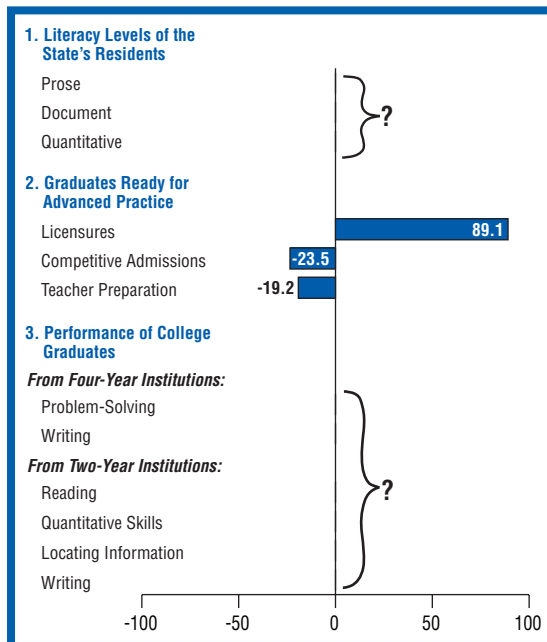

Like most states, Louisiana receives an “Incomplete” in Learning because insufficient data would not allow meaningful state-by-state comparisons. However, data are available this year to examine the readiness of college graduates—from two- and four-year institutions—for advanced practice. State results are described below.

In *Measuring Up 2006*, data are available, for the first time, for all fifty states on “Graduates Ready for Advanced Practice” indicators (see chart). In the 2004 edition of *Measuring Up*, state-level results on all Learning indicators were reported for five states (Illinois, Kentucky, Nevada, Oklahoma, and South Carolina) that participated in a pilot project directed by the National Forum on College-Level Learning and funded by the Pew Charitable Trusts.* This project evaluated state performance in Learning on three topics:

1. Literacy Levels of the State’s Residents. These indicators answer the question, “What are the abilities of the state’s college-educated population?” The answer provides information about the level of “educational capital” the state can count on to develop a competitive 21st-century workforce and a responsible citizenry.

2. Graduates Ready for Advanced Practice. These indicators address the question, “To what extent do colleges and universities in the state educate students to contribute to the workforce?” These measures examine how well prepared state college and university graduates are to enter a licensed profession or participate in graduate study.

3. Performance of College Graduates. These indicators address the question, “How effectively can college and university graduates in the state communicate and solve problems?” The ability of college graduates to perform complex academic and real-world tasks is the “bottom line” in Learning. This can only be determined by common direct assessments of college graduate abilities.

Note: Measures under the third cluster will require special data collection efforts similar to those undertaken by the five pilot project states in 2004.

Measuring Up 2006 employs the same methodology for Learning as used in the 2004 edition of *Measuring Up*. Overall state performance is illustrated by a bar chart for each state. In the chart, the data for each indicator are represented by a bar showing the number of percentage points the state performed above or below the national average.

The overall picture for *Measuring Up 2006* remains incomplete. While “Graduates Ready for Advanced Practice” results can be reported for all states, results for “Literacy Levels of State’s Residents” can only be calculated for five of the six states that participated in a state-level version of the National Assessment of Adult Literacy (SAAL) conducted in 2003. Results for “Performance of College Graduates”, reported in the 2004

edition of *Measuring Up*, were based on assessments administered to representative samples of college students in each of the five pilot project states. These measures were not updated for 2006.

Louisiana Results

Louisiana’s higher education system is very competitive in workforce preparation as reflected in professional licensure examinations. The state is almost 90% above the national benchmark, making it the top state on this measure. Seventy-five percent more Louisiana graduates take such examinations than is typical nationally, and their pass rate matches the national average.

In contrast, Louisiana is almost 25% below the national benchmark in preparing students for graduate study as reflected in graduate admissions examinations. Although almost 40% more Louisiana graduates take such examinations than is typical nationally, the proportion earning competitive scores is only 70% of the national average. Finally, Louisiana is almost 20% below the national benchmark with respect to pass rates on the state’s teacher examinations.

Louisiana did not participate in the SAAL, so no results on literacy are available.

*More information on the National Forum on College-Level Learning can be obtained at http://www.highereducation.org/reports/mu_learning/index.shtml.

How Louisiana Measures Up Internationally

Participation*

■ About 32% of young adults, ages 18 to 24, in Louisiana are currently enrolled in college. Although Louisiana's enrollment rate compares well internationally, it represents only 67% of the rate in Korea, the best-performing nation on this measure. Louisiana is also surpassed by Greece, Finland, Belgium, Ireland, and Poland (see figure 1).

Completion

■ When compared internationally, Louisiana is surpassed by many countries in the proportion of students who complete certificates or degrees. With 15 out of 100 students enrolled completing a degree or certificate, Louisiana's completion rate is only 63% of the rate in the United Kingdom, the top-performing country on this measure, where 24 out of 100 students complete certificates or degrees. Louisiana also lags Japan, Portugal, Australia, Switzerland, Denmark, Ireland, New Zealand, France, Iceland, Korea, Belgium, Sweden, the Slovak Republic, Poland, Spain, the Netherlands, and Hungary (see figure 2).

Educational Level of Adult Population

■ Louisiana's younger adults, ages 25 to 34, are ahead of older adults, ages 35 to 64, in attaining a college degree. Internationally, however, the proportion of younger adults with a college degree in Louisiana is only 65% of the proportion in Japan, the top-performing nation on this measure. Louisiana is also surpassed by Canada, Korea, Finland, Norway, Sweden, Belgium, Spain, France, Ireland, Australia, and Denmark.

Figure 1. Percent of Young Adults (Ages 18-24) Currently enrolled in College, 2003

Figure 2. Total Degrees/Certificates Awarded Per 100 Students Enrolled, 2004

*This measure includes both undergraduate and graduate enrollment, whereas the similar indicator in the graded category only reports undergraduate enrollment.

Note: The charts show index scores, as measured against the top performance. The top performer, defined as the median value of the top five performers, receives a score of 100. The top performer can be a nation or a U.S. state. For more international comparison information, go to www.highereducation.org.

State Context	Louisiana	State Rank
Population (2005)	4,523,628	24
Gross state product (2004, in millions)	\$160,186	24

Institutions of Postsecondary Education (2004-05)		
Public 4-year	17	
Public 2-year	42	
Private 4-year	13	
Private 2-year	18	
Students Enrolled by Institution Type (2004)		
Public 4-year	131,837	62%
Public 2-year	50,359	24%
Private 4-year	25,364	12%
Private 2-year	4,341	2%
Students Enrolled by Level (2004)		
Undergraduate	211,901	86%
Graduate	28,001	11%
Professional	6,399	3%
Enrollment Status of Students (2004)		
Full-time	179,182	73%
Part-time	67,119	27%
Net Migration of Students (2004)		
Positive numbers for net migration mean that more students are entering than leaving the state to attend college. Negative numbers reveal the reverse.	2,662	
Average Tuition (2005-06)		
Public 4-year institutions	\$3,684	
Public 2-year institutions	\$1,513	
Private 4-year institutions	\$20,975	
State and Local Appropriations for Higher Education		
Per \$1,000 of personal income, FY 2006	\$10	
Per capita, FY 2006	\$292	
% change, FY 1996-2006		n/a

Working-Age Population (ages 25-64) by Race/Ethnicity, 1980-2020

Racial and Ethnic Gaps in Educational Levels of Working-Age Population (ages 25-64), 2000

	Whites	African-Americans
Less than a high school credential	16%	31%
Associate's degree or higher	28%	15%

* This index, created by the Progressive Policy Institute, measures the extent to which a state is participating in knowledge-based industries. A higher score means increased participation.

Note: Percentages might not add to 100 due to rounding.

QUESTIONS & ANSWERS

Q: What is being graded in this report card, and why?

A: *Measuring Up 2006* grades states, not individual colleges or universities, on their performance in higher education. The states are responsible for preparing students for higher education by means of sound K–12 school systems, and they provide most of the public financial support—\$72 billion currently—for colleges and universities. Through their oversight of public colleges and universities, state leaders affect the types and number of programs available in the state. State leaders also determine the limits of financial support and often influence tuition and fees for public colleges and universities. They establish how much state-based financial aid is available to students and their families, which affects students attending both private and public colleges and universities.

Q: How are states graded?

A: *Measuring Up 2006* grades states in six performance categories: Preparation, Participation, Affordability, Completion, Benefits, and Learning. Each category is made up of several indicators, or quantitative measures—a total of 35 in the first five categories. Grades are calculated based on each state's performance on these indicators, relative to the best-performing states. As in earlier editions, state data are drawn from the most recent public information available, and the grades in *Measuring Up 2006* reflect state performance in 2004 or 2005.

In the Affordability category, *Measuring Up 2006* reflects the major changes in tuition and financial aid that occurred in 2005. In addition, each state's performance is calculated relative to the performance of top states in the early 1990s—rather than relative to the current performance of top states, as is the case with other graded categories. This difference in comparison, first introduced in *Measuring Up 2004*, creates a more stable basis for states to assess their performance in Affordability, which is the most volatile of the graded categories.

Measuring Up 2006 is the first edition that includes data in the Learning category for all 50 states on the extent to which colleges and universities prepare students to contribute to the workforce (see the “Graduates Ready for Advanced Practice” indicators). As in *Measuring Up 2004*, most states in 2006 receive an “Incomplete” in Learning due to the lack of reported information. This year, however, nine states receive a “Plus”: Illinois, Kentucky, Maryland, Massachusetts, Missouri, Nevada, New York, Oklahoma, and South Carolina. These nine states reported adequate data in more than

one of the indicator groups either through their participation in a pilot project, or by collecting additional state data for the state version of the National Assessment of Adult Literacy (NAAL) conducted in 2003.

All data used to grade states in *Measuring Up 2006* were collected from reliable national sources, including the U.S. Census Bureau and the U.S. Department of Education. All data are the most current available for state comparisons, are in the public domain, and were collected in ways that allow meaningful comparisons among states. Please see the *Technical Guide for Measuring Up 2006* (available at www.highereducation.org) for more information regarding data sources used in *Measuring Up 2006*.

Q: What information is provided but not graded?

A: The state report cards highlight important gaps in college opportunities for various income and ethnic groups, and they identify improvements and setbacks in each state's performance over time. Each report card also presents important contextual information, such as demographic trends, student migration data, and state funding levels for higher education. International comparisons provide new contextual information for states.

Q: Why does *Measuring Up 2006* include international indicators?

A: *Measuring Up 2006* is the first edition to draw on international indicators, at both the state and national levels. In a global economy, it is critical for each nation to establish and maintain a competitive edge through the ongoing, high-quality education of its population. *Measuring Up 2006* provides essential information on how well the nation and each of the 50 states are preparing residents with the knowledge and skills necessary to compete effectively in the global economy. As with other data in *Measuring Up*, each international measure is based on the most current data available. In this case, the data are from the Organisation for Economic Co-operation and Development (OECD). International comparisons are used to gauge the states' and the nation's standing relative to OECD countries on the participation and educational attainment of their populations.

For more information on international comparisons, see *Measuring Up Internationally: Developing Skills and Knowledge for the Global Knowledge Economy* by Alan Wagner. For more information on available data sources, see the *Technical Guide for Measuring Up 2006* (available at www.highereducation.org).
